I have problem on this code, I have searched the net to found this code, but it's not working. Can any body please tell me where i have gone wrong?. Thanks. UPD: i have searched net, and i found that i have to add.exe into my folder, i have updated it, and it's working.Thanks for help. A: Your code is taking the downloaded file as if it were a zip file and trying to unzip it. Using Archiver would have been the simplest way to go. And with the resource server, it would have been even easier to make the installer work than the resource server. I strongly suggest you look into WinRAR, since your problem seems to be that you're downloading the wrong file, and that is making you think that you're trying to extract the wrong file. Q: Turn off ActiveMQ sink and failover queue on startup I'm trying to use an ActiveMQ queue for JMS, but I don't want the message to be consumed unless something happens on the server. Is there a way to put a "failover" message on the queue when starting up the server, so it doesn't get processed when the server starts up? A: Use the JMS Connectors and jms_XXX.properties files for specifying the settings you want. For a JMS consumer you can specify the following and it will behave like you want it to behave: # JMS System properties; leave blank for default values jms_destination_type=queue jms_transaction_type=jms jms_transaction.base.transaction_type=NON_XA jms_transaction.commit.transaction_type=NON_XA jms_transaction.rollback.transaction_type=NON_XA jms_failover_listener.class_name=org.apache.activemq.command.ActiveMQFailoverListener jms_failover_listener.failover_queue=FOQUE jms_failover_listener.failover_destination=FOALC Just supply these settings in the jms_XXX.properties file and the failover message will never be consumed. m + 1; } } return 1; } 6d1f23a050
